

Crushing and screening Plant

Crushing and screening Plant

Main applications:

widely used in highway, railway, mineral separation, water and electricity project, building materials, municipal refuse.

Crushing and screening unit equipment can be divided into three forms: stabilized, semi-portable and portable. It consists of jaw crusher, impact crusher, cone crusher, roll crusher, reversing crusher, vibrating feeder, vibrating screen, vertical shaft crusher, granulating machine, sand and stone washing machine, belt conveyor.

Shanbao brand crushing and screening unit equipment manufactured by our company has nearly twenty years of history, with over one thousand production line, and part of national standards is designed by our company. Shanbao brand crushing and screening unit equipment has a huge designed data base, for different customers' demands, we can design best operational process, most proper devices configuration and make best use of production site. Meanwhile, advanced PLC electrical control system can assure whole set of equipment work safely and reliably, easy to operate and maintain, high efficiency and energy saving.

We adhere to the principle of meeting all the requirements of our customers, offering one package service of turn-key construction including design, instruction for installation and adjustment. Shanbao brand crushing and screening unit equipment have been distributing in home and abroad, and receiving good reputation from users.
